

Rule vs. fact survival under single-cycle compaction

(a) Between-items probe
(unmarked, canonical labels)

(b) Single-rule stress probe
(per cell, confirmed pressure)

■ Rules (a: W+G survival; b: referent presence) ■ Facts (a: W+G survival) ■ Incidental-tracer base rate

Error bars: 95% CI (panel a: conversation cluster bootstrap; panel b: Wilson, n=8 per cell).
